IBM FileNet P8 V5.6.x | Corporate Training

Day 1

Enterprise Content Management & FileNet Overview

Administration & Development Training — 10 Days | 40 Hours

Rajesh Pasham

Corporate ECM Trainer | IBM Certified FileNet P8 Professional

Certification Alignment: IBM C1000-074

- ECM Fundamentals
- FileNet Product Suite
- Content Lifecycle
- Platform Capabilities
- Lab: Explore FileNet

Day 1 — Session Agenda

4 Hours | Enterprise Content Management & FileNet Overview

Introduction to Enterprise Content Management

IBM FileNet Product Suite Overview

Break

FileNet Platform Capabilities

Lab: Explore FileNet Platform Components

Q&A, Review & Day 1 Summary

What is Enterprise Content Management?

"ECM is the systematic management of an organization's unstructured information — throughout its entire lifecycle — to support business operations, ensure compliance, and drive efficiency."

Volume

80-90% of enterprise data is unstructured

Compliance

GDPR, SOX, HIPAA, FDA regulations

Cost

Reduce paper, storage and retrieval costs

Speed

Faster decisions with instant content access

Risk

Protect against unauthorized access and loss

Collaboration

Teams work on shared, controlled content

Structured vs. Unstructured Data

STRUCTURED DATA

- Database records (SQL)
- ERP transactions
- Spreadsheet data
- CRM contact records
- Financial ledger entries

~ 20% of enterprise data

VS

UNSTRUCTURED DATA

- Office documents (Word, PDF)
- Emails & correspondence
- Scanned images & forms
- Engineering drawings
- Audio / video files

~ 80% of enterprise data

💡 IBM FileNet P8 primarily manages UNSTRUCTURED content — documents, images, emails, and more — making up 80-90% of all enterprise data.

Content Lifecycle Management

1. Capture	2. Manage	3. Store	4. Preserve	5. Deliver	6. Dispose
Scan, import, email capture, web forms	Classify, index, version control	Object stores, storage areas, archiving	Retention policies, WORM, audit trails	Search, workflow routing, publishing	Disposition, legal holds, deletion

Key Principle: Content doesn't just get stored — it follows a managed lifecycle from creation through disposition. FileNet P8 provides tools for managing EVERY phase.

🔒 Records Management: Formally declare content as a record, making it immutable and subject to retention schedules.

⚖️ Legal Hold: Suspend normal disposal rules to preserve content for litigation — even after retention period ends.

Governance & Compliance

Major Regulatory Frameworks Addressed by IBM FileNet P8

GDPR	All Industries (EU)	Right to erasure, data minimization, consent tracking
SOX	Public Companies	Financial records retained 7 years, full audit trails
HIPAA	Healthcare	Patient data protection, audit logs, access controls
FDA 21 CFR Part 11	Pharmaceutical	Electronic records, digital signatures, system validation
SEC Rule 17a-4	Financial Services	Immutable records, WORM storage compliance

🚨 **Non-compliance fines can reach millions — ECM is not optional; it's a business-critical infrastructure.**

IBM FileNet P8 Product Suite

Four Core Components — Working Together to Deliver Enterprise ECM

CPE

Content Platform Engine

Core Repository

Document storage, metadata management, security enforcement, event handling, versioning, and records management. The foundation everything else depends on.

PE

Process Engine

Workflow Automation

Models, executes, and monitors business processes. Provides work queues, routing logic, escalation, and step processors for document-centric workflows.

ICN

IBM Content Navigator

User Interface Layer

Modern web-based UI for end users. Plugin framework for customization, role-based desktop configuration, and multi-repository search and browsing.

CM

Case Manager

Knowledge Work

Extends FileNet for complex, ad-hoc situations. Manages cases with associated documents, activities, and team collaboration across the case lifecycle.

Content Platform Engine (CPE) — Deep Dive

Core Capabilities

Document Storage & Retrieval

Manages content files in Object Stores with full metadata indexing

Version Control

Check-in/Check-out with complete version history and rollback

Security Enforcement

Access Control Lists (ACLs) at object and property level

Event Handling

Subscriptions and event actions triggered by document lifecycle events

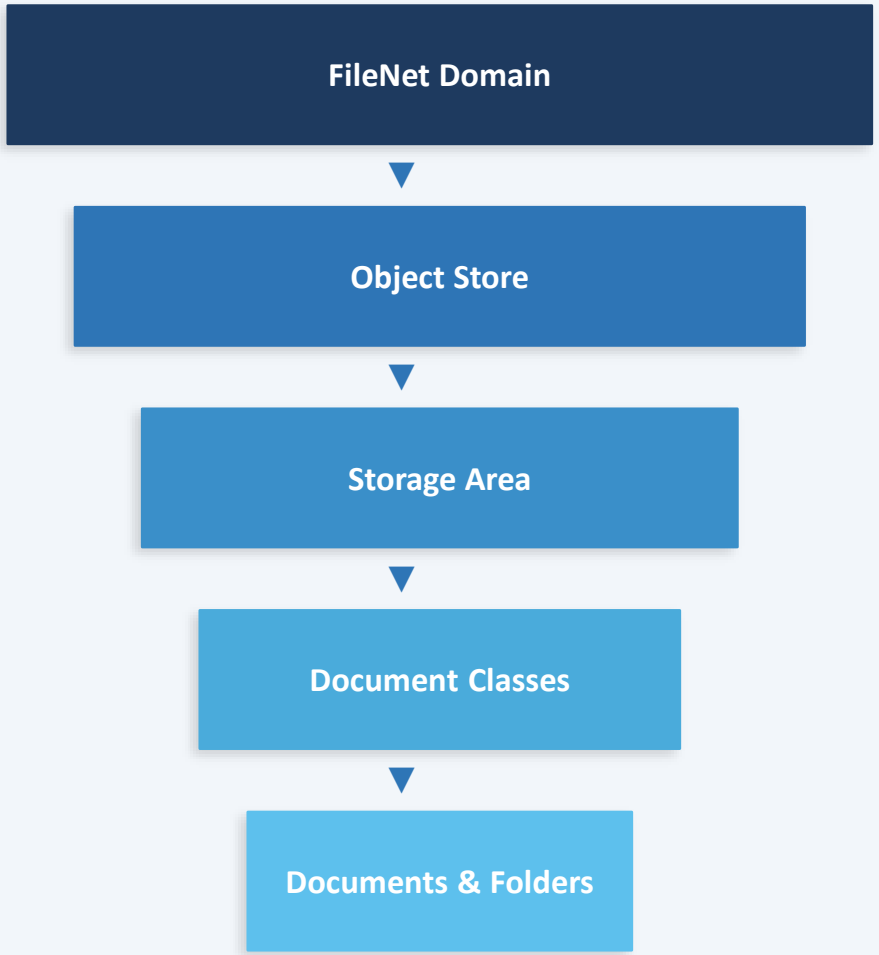
Records Management

Formal records declaration, retention, and disposition enforcement

Full-text Search

Indexed content search via IBM Content Search Services (CSS)

Organizational Hierarchy



Process Engine & IBM Content Navigator

Process Engine (PE) — Workflow Automation	
Work Queues	Containers holding items awaiting user action
Process Maps	Visual workflow diagrams designed in Process Designer
Step Processors	Business logic executed at each workflow step
Routing Logic	Sequential, parallel, conditional branching
Timers & Escalations	Deadline management and automatic reassignment
Event Actions	Triggers that start workflows from content events

IBM Content Navigator (ICN) — User Interface	
Document Browsing	Navigate folders, preview & download content
Search Templates	Saved parameterized searches for quick retrieval
Teamspaces	Collaborative workspaces for project teams
Plugin Framework	Extend ICN with custom Java plugins
Role-based Desktops	Different UI configurations per user role
Workflow Integration	Process work items directly from ICN

FileNet Platform Capabilities

Document Management

- ✓ Check-in / Check-out
- ✓ Version control & history
- ✓ Metadata & full-text search
- ✓ Folder organization & linking

Records Management

- ✓ Record declaration (immutable)
- ✓ File plan classification
- ✓ Retention schedules
- ✓ Legal hold management

Workflow Automation

- ✓ Visual process design
- ✓ Parallel & sequential routing
- ✓ Timer-based escalation
- ✓ Exception handling

Integration Capabilities

- ✓ Java API (CEJava)
- ✓ .NET API & REST API
- ✓ CMIS open standard
- ✓ IBM MQ / event-driven

FileNet Integration Capabilities

IBM FileNet P8 — The Content Backbone for Your Enterprise

SAP / ERP

Archive ERP docs alongside transactions

Email Systems

Email archiving and management

Salesforce / CRM

Attach contracts to opportunities

IBM FileNet P8

Java / .NET Apps

Custom app integration via SDK

SharePoint

Surface FileNet content in SP

REST API / Mobile

Modern web and mobile apps

APIs: Java (CEJava) | .NET SDK | REST (ACCE) | CMIS | IBM MQ | Web Services (SOAP)

Essential FileNet P8 Terminology

Domain	Top-level container for all FileNet configuration
GCD	Global Config Database — stores domain/OS connection info
Property Template	Reusable metadata field definition
ACL	Access Control List — security for each object
Check-in/out	Locking mechanism preventing concurrent edits
Subscription	Notify users when content changes occur
Object Store	Logical repository for documents and metadata
Document Class	Template defining content type and metadata structure
Storage Area	Physical location for content files
Version Series	All versions of a document tracked together
ACCE	Admin Console for Content Engine (web-based admin UI)
CMIS	Open standard protocol for ECM integration

Day 1 Summary — Key Takeaways

1. ECM manages the full lifecycle of unstructured enterprise content — 80-90% of all data
2. Content Lifecycle has 6 phases: Capture → Manage → Store → Preserve → Deliver → Dispose
3. Governance & compliance (GDPR, SOX, HIPAA) are primary ECM business drivers
4. FileNet P8 has 4 core components: CPE (foundation), PE (workflow), ICN (UI), Case Manager
5. Content Platform Engine is the core — everything: UI, workflow, and APIs depend on it

Thank You!

Day 1 Complete — Enterprise Content Management & FileNet Overview

Questions & Discussion

Trainer: Rajesh Pasham

Course: IBM FileNet P8 V5.6.x Administration & Development Training

Day 1 of: 10 Days | 40 Hours Total

Certification: IBM C1000-074 (FileNet P8 V5.5.x Administration)

See you tomorrow for Day 2: FileNet P8 Architecture Deep Dive!
