

# **Administration Console for Content Platform Engine**

## Unit objectives

- Use Administration Console for Content Platform Engine to locate FileNet P8 domain objects.

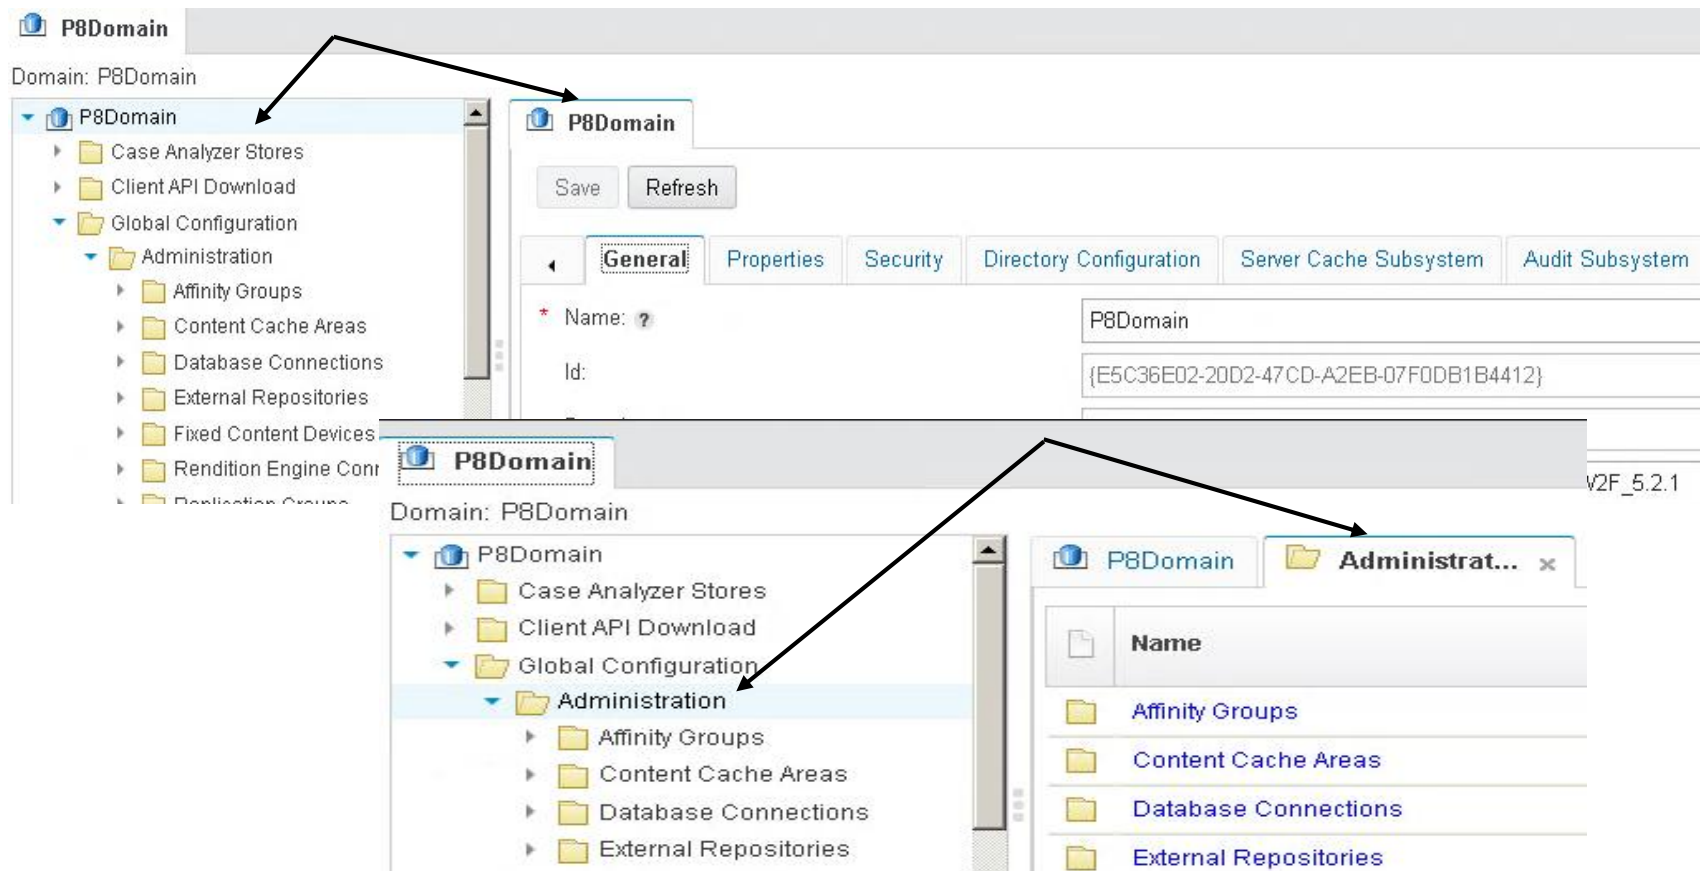

# Administration Console for Content Platform Engine

- Web application used to administer FileNet P8 domains.
  - Global Configuration data (GCD)
  - Object stores
  - Other objects

## Navigating ACCE

- Click a node in the left navigation
- A tab opens on the right

## Global Configuration data (GCD)

- Objects and attributes that apply to the entire FileNet P8 Domain.

The image displays two screenshots of the IBM Administration Console for Content Platform Engine, illustrating the navigation structure and the Global Configuration data (GCD) list.

**Top Screenshot:** The console shows the 'P8Domain' domain. The left-hand navigation tree is expanded to 'Global Configuration' > 'Administration'. The right-hand pane displays a list of objects under the 'Name' column:

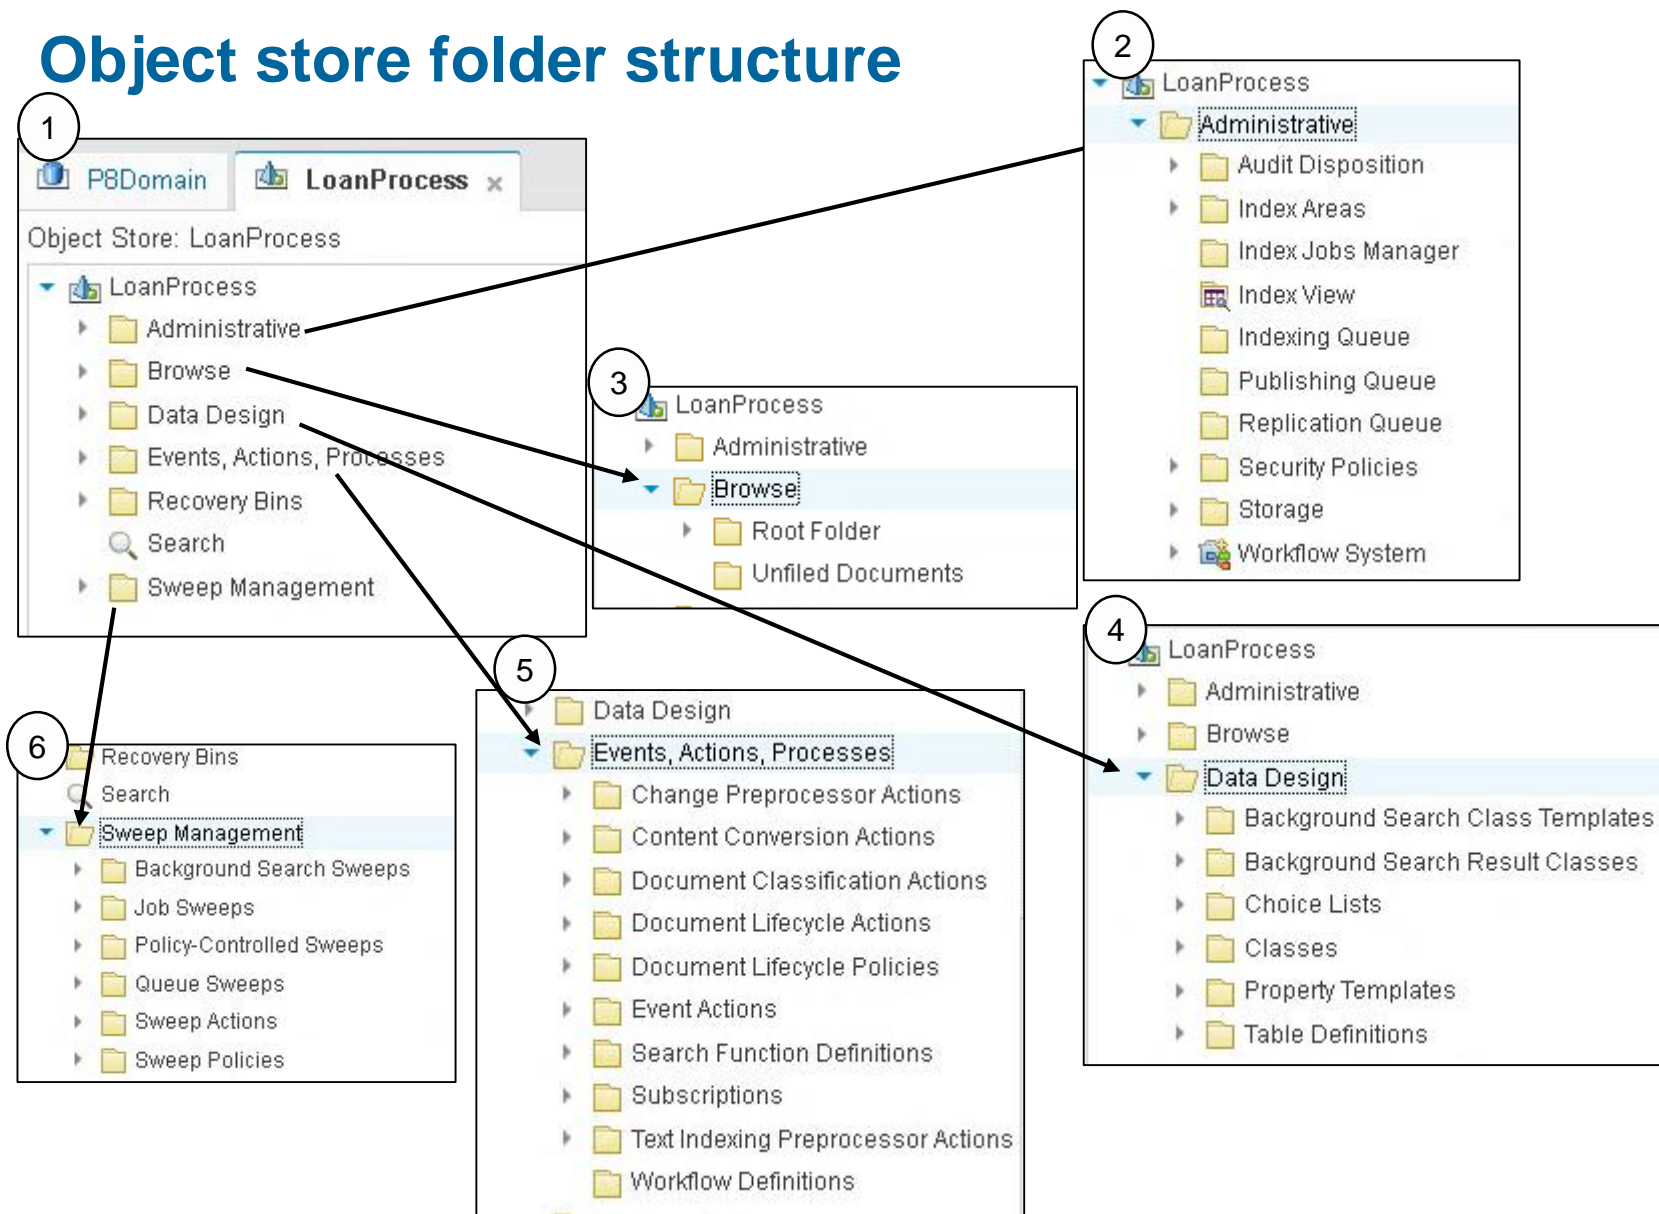

Name
Affinity Groups
Content Cache Areas
Database Connections
External Repositories
Fixed Content Devices
Rendition Engine Connections
Replication Groups
Sites
Text Search Servers

**Bottom Screenshot:** The console shows the 'P8Domain' domain. The left-hand navigation tree is expanded to 'Global Configuration' > 'Administration' > 'Data Design'. The right-hand pane displays a list of objects under the 'Name' column:

Name
Add-ons
Marking Sets

# Object store folder structure

## Configure ACCE as a desktop feature

- Create a single administration desktop to administer multiple applications.

Desktop: **Sample Desktop**

\* General \* Repositories \* **Layout** Appearance
