

IBM FileNet P8 V5.6.x Administration & Development Training

Duration: 10 Days (4 Hours / Day 9am-1pm IST)

Total Duration: 40 Hours

Target Audience

- ECM Administrators
- Enterprise Content Architects
- Developers integrating ECM solutions
- Production Support Engineers

Certification Alignment

Exam: **IBM FileNet P8 V5.5.x Administration (C1000-074)**

Day 1 – Enterprise Content Management & FileNet Overview

Session Topics

Introduction to Enterprise Content Management

- ECM concepts
- Structured vs unstructured data
- Content lifecycle management
- Governance & compliance

IBM FileNet Product Suite Overview

- Content Platform Engine
- Process Engine
- IBM Content Navigator
- Case Manager (overview)

FileNet Platform Capabilities

- Document management
- Records management
- Workflow automation
- Integration capabilities

Lab

- Explore FileNet platform components
- Navigate FileNet architecture diagrams

Day 2 – FileNet Architecture Deep Dive

FileNet P8 Architecture

Architecture layers

- Client Layer
- Application Layer
- Content Services Layer

- Data Storage Layer

Core components

- **Content Engine (CE)**
- **Process Engine (PE)**
- **Application Engine**
- **IBM Content Navigator**

Global Configuration Database (GCD)

- Purpose
- Domain configuration
- Object Store relationship

Lab

- Explore FileNet architecture
- Connect to Administration Console

Day 3 – Content Engine Fundamentals

Content Engine Overview

CE responsibilities

- Document storage
- Metadata management
- Security enforcement
- Event handling

Object Store Concepts

- Domain
- Object Store
- Storage Area
- Classes and properties

Object Types

- Documents
- Folders
- Custom objects
- Annotations

Lab

- Create Object Store
- Create folder structures
- Upload documents

Day 4 – Metadata & Content Modeling

Designing Metadata Models

Topics

- Property templates
- Document classes
- Folder classes
- Metadata inheritance

Versioning & Content Lifecycle

- Version series
- Check-in / Check-out
- Document lifecycle policies

Best Practices

- Metadata design strategy
- Indexing optimization
- Class hierarchy design

Lab

- Create custom document classes
- Define metadata fields
- Implement document versioning

Day 5 – Storage & Security Administration

Storage Configuration

Storage components

- Storage areas
- Storage policies
- Content caching

FileNet Security Model

Security architecture

- Access Control Lists
- Security inheritance
- Role based access

LDAP Integration

- Configuring LDAP
- Authentication mechanisms
- Group management

Lab

- Configure storage areas

- Implement document security

Day 6 – Process Engine & Workflow Architecture

Process Engine Overview

Workflow automation capabilities

Key components

- Workflow system
- Work objects
- Event actions
- Queues

Workflow Concepts

- Work items
- Step processors
- Workflow routing

Lab

- Install and configure Process Engine
- Create workflow queue

Day 7 – Workflow Development using Process Designer

Process Designer Introduction

Workflow design components

- Process maps
- Workflow steps
- Routing logic
- Conditional branches

Workflow Components

- Activities
- Subprocesses
- Escalations
- Timers

Lab

- Build a document approval workflow
- Deploy workflow

Day 8 – IBM Content Navigator (ICN)

ICN Overview

ICN architecture

- Web client architecture
- Plugin framework
- Desktop configuration

Core Features

- Document browsing
- Search templates
- Teamspace
- Favorites

Customization

- ICN plugins
- UI extensions
- Event handling

Lab

- Configure ICN desktop
- Create search templates

Day 9 – API Integration & Automation

FileNet APIs

Supported APIs

- Java API
- .NET API
- REST APIs

Key Operations

- Document creation
- Metadata updates
- Folder operations
- Search queries

Event Driven Automation

Topics

- Event subscriptions
- Pre / post processing
- Custom event handlers

Lab

- Upload document using REST API
- Trigger workflow using API

Day 10 – Deployment, Migration & Certification Preparation

FileNet Deployment Manager (FDM)

Deployment concepts

- Exporting configurations
- Importing configurations
- Environment promotion

Migrated components

- Object stores
- Workflows
- Classes
- Security configurations

Performance & Troubleshooting

Topics

- CE performance tuning
- Workflow performance
- Logging and monitoring

Certification Preparation

Exam Coverage

- FileNet architecture
- Content Engine administration
- Workflow management
- Security configuration
- Deployment tools

Hands-On Exercises

1. Create Object Store
2. Design Metadata Model
3. Configure LDAP Security
4. Build Workflow
5. Integrate with REST API
6. Deploy solution using FDM
